It needs to be able to be encrypted (AES 256 bit preferred, suggestions welcome), and be able to be distributed in a run-time format, for sale to users.. We currently have an app for iPhone that we use to view selected exported data If we could go cross platform onto PC that would be nice, but not required.

1. best database client
2. best database client for windows
3. best database client linux

I'm open to all suggestions - thank you!Access is a Microsoft database, porting away from it may be a nightmare.. Importing from Excel is a must, as well as being able to export sections of data to an iPhone, iPad, etc.

Am I Running 64 Bit Mac Os X. Ntfs-3g For Mac

We are looking for the same situation with a Mac solution For this version, being able to be used on the Mac will be enough.. Our Access program is AES 256 encrypted at all times, even when open, and it is never on the internet.. Please forgive me if I've posted to the wrong community - it's my first time here.. We are not required to be HIPAA compliant, but hold ourselves to a similar standard.. If a client gives you a CSV file with wacky columns or malformed data, you can easily.. While waiting for the IT pros to assist with a plan, call the team at Filemaker and see what they can do for you.. I am a member there and will offer any guidance as well Lastly, Apple owns FileMaker which is a Mac/PC-friendly database system.. I would like to know which database system will support faster response to queries and comes free of cost. cea114251b Operation Flashpoint Resistance Download
